

Ergonomics

Improving workplace safety and productivity

Ergonomics is a science used by organizations to improve safety and productivity in the work environment. Ergonomics facilitates the design of safe, comfortable and effective work environments including, tools, machines, systems, jobs and work tasks.

Aon's ergonomics specialists work with diverse corporate cultures to provide customized and distinctive solutions incorporating the practical evaluation of applied ergonomic interventions to improved workplace safety and productivity.

Our specialists help reduce musculoskeletal disorders and improve worker productivity. Through comprehensive assessments that identify potential and existing injuries and illnesses, we help your organization mitigate exposures to these risks and reduce costs associated with workers' compensation.

Delivering Results

Our corporate-driven strategies help your organization resolve a wide range of significant ergonomics concerns. These strategies include:

- Employee injury prevention and comfort consultation
- Comprehensive worksite analysis
- Identification of risk factors and physical job demands
- Engineered workplace design and process solutions
- Needs-based customized ergonomics training
- Tool and equipment procurement guidelines
