

Midstream oil and gas

Risk management and insurance

The complexity of midstream operations brings with them a variety of unique risks. Aon's experience ensures that our clients enjoy effective, tailored risk management and insurance programs

Midstream companies operate in a complex and challenging business environment, facing risks that range from stringent environmental regulations or the impact of natural disasters to the continued pressure to expand business in a competitive global climate.

A comprehensive approach to risk management and insurance is an efficient and cost effective way of mitigating these risks and enabling a company's growth strategy. Risk management and insurance partners need to be carefully selected to ensure they have the global resources, solutions and expertise to match the myriad of risks that a midstream company faces.

The risks and our services

There are a number of risks that face operations in the midstream energy sector. Rather than take a one size fits all approach, we work with our clients and Aon colleagues around the world to create a risk management program that is tailored to your needs.

- Your risk profile continues to change as your company evolves. Our actuarial and analytics specialists ensure that you have the appropriate balance of insurance coverage and risk retention for your risk profile
- The scrutiny surrounding environmental requirements and regulations continues to grow. Our team of environmental risk and claims professionals will help you understand the increasing requirements for contamination clean-up and remediation, more stringent air-emission standards, and property loss or natural resource damages
- Natural disasters can wreak havoc in terms of both property loss and business interruption. Our property experts work with you to identify and minimize your exposure through the use of innovative risk management and insurance tools and services to help ensure that you are covered in the event of a claim
- Growth through mergers or acquisitions presents both opportunities and uncertainties. We can provide assistance at each stage of the process including asset valuation and an assessment of the insurability of the assets. Our global network of professionals ensures that we have the local resources in place to assist you in any new market you enter
- The cost of constructing new pipeline infrastructure is significant. We have specialists in the construction market that can help you mitigate this risk by developing solutions such as builder's risk, delay-in-start up, and owner controlled insurance programs
