Secure Software Development Lifecycle

World-class security pros are joining your dev team.

The Need

Competition, your clients' demands for better connectivity, and the constant pace of disruption. All of these pressures conspire to push you to pick up the pace of innovation and product launches. But customers are now demanding that software also be secure.

How We Help

We help you avoid the expensive redesign and patchwork coding efforts that happen when flaws are discovered too late in the development lifecycle. We offer four key services:

- **Threat Modeling:** It's nearly impossible to design and build a secure application without fully understanding your threat landscape. We give you the visibility to see the potential risks your application will face in the current environment by modeling your applications against the changing threat landscape and exposing vulnerabilities so that you can mitigate from the start.

- **SDL Transformation:** Incorporating Specification and Description Language (SDL) requires an organizational shift. For businesses ready for a culture change, we provide longer-term mentoring and consulting to help you build a custom security implementation program.

- **Secure Development Training:** Your development team is the first line of defense against a cyber attack. We train your team on the latest attack vectors and mitigating controls so they can build secure code independently. Our focus includes .NET, Java/J2EE and other critical platforms.

- **SDL Tools Integration:** To truly be in control of security, you need the know-how to test your own code. We integrate industry-standard testing tools into your environment so that you can conduct your own static analysis when you want to.

Why Us

We're Technical Specialists

We know the short cuts you might think of taking and what could go wrong if you do. We bring this experience to bear.

Global Boutique

We are a global risk management firm that operates like a boutique. This shows in our service and the deep partnerships we form with our clients. We take a custom approach to each engagement and meet you where you're at.
