Flooding is the costliest natural disaster. Dominated by its monsoon season, Cambodia’s growing population is congregated in areas of high flood risk.

Flooding affects hundreds of thousands of people in Cambodia through death, disease, damaged crops and property, or lost livestock.

Aon’s data-driven solutions can help organizations assess flood impact and improve disaster relief efforts.

In partnership with University College London and the Catholic Agency for Overseas Development (CAFOD), Aon leveraged ImpactOnDemand™, its innovative data visualization tool, to boost disaster preparedness.

**GLOBAL ECONOMIC LOSSES BY PERIL (2006-2016)**

- **FLOODING:** $52
- **EARTHQUAKE:** $53
