

Workplace Misconduct

Protect your Organisation against Malicious Insiders

What is this service?

Employee misconduct takes many forms. An employee is accused of sexually harassing or making threatening remarks to a colleague, vendor or client. Maybe an employee has embezzled funds, stolen sensitive information or engaged in an activity you consider a conflict of interest. Retrievable forensic evidence can uncover an employee involved in an activity such as stealing money, proprietary information, intellectual property or trade secrets. This will allow you to uncover the truth without implicating innocent employees. To properly collect, analyse, and document this type of evidence, a specialised team with access to specialised tools is required.

How does it work?

We listen to your concerns, interview key stakeholders and investigate. No form of digital media is outside our scope. We probe open source, social media and proprietary databases, and our forensic examiners identify, preserve, and analyse data to help build a chronology of the incident. When dealing with fraud, our forensic accountants help confirm and calculate damages, and find hidden assets.

Why is it important?

Serious employee misconduct threatens an organisation's reputation and can introduce risk of liability. Theft of an organisation's proprietary Intellectual Property often leads to loss of market share and erodes trust.

Why Us?

Go-To Firm for Cyber Security

As a leading firm in the cyber security testing and incident response space, we've responded to 90 percent of the highest profile breaches in the last decade¹. Our experience from years in the trenches, informs our work. This experience, together with our advanced threat intelligence capabilities, allows us to keep abreast of the latest attack vectors, how cyber attacks are perpetrated, and how to stop them.

Credentialed Specialists

We are credentialed specialists in network, database, mobile device, and other forms of digital forensics; malicious code and other types of malware; computer fraud and abuse; and data discovery, analytics, and disclosure.
