

Addressing construction professional liability risks during these times of uncertainty

Webinar Recordings | June 10th and 11th, 2021

Design Risk in the Design-Build Delivery Model: An autopsy of design claims

This panel will consider whether particular projects are causing more claims? How often is a design error the cause of a claim? Are overaggressive bids masquerading as design claims? Can alternative delivery models minimize/mitigate allegations of professional liability claims? Is Rectification coverage the answer to the Insured vs. Insured dilemma?

Claims: The Primary Driver of Market Changes

This panel will explore the emerging issues and trends which are triggering frequent and severe claims in the construction field. Industry experts will attempt to identify some of the root causes for these losses and potential anecdotes to assist in avoiding replication.

Choose Wisely: How the selection of your Joint Venture partner and delivery model impact professional liability coverage

This panel will investigate the risks associated with taking a leadership position in a Design-Build project—and particularly best practices related to addressing professional liability risk with your partners.

Future Risks: Looking over the horizon

Will new technology improve design risks? How will designs change after the COVID-19 pandemic? The growth of modularisation in construction? What happens if the professional liability insurance market continues to harden? Will project specific insurance be available in the future?

These recordings are available to our clients, prospects and insurer partners. If you'd like to request access to the webinar series, please contact **Michael Earp**.
