

Technology Corner Profile

Low productivity and a low digitization rate have sparked an influx of new technology being developed, which has the potential to make a profound impact on the risks involved on construction projects and within asset management such as safety risk and design risk. Aon understands that this trend may be of interest to our clients and has created the Technology Corner to profile different construction technology and asset management companies. Each profile gives an overview of the technology, addresses its risk treatment potential, and identifies what insurance policies its implementation could impact. Our goal is multi-faceted to raise awareness about leading construction and asset management technologies that could help reduce risk on site for the purposes of educating our clients and the insurance markets.

Product Description

MindForge, a division of IRMI, is a cloud-based software platform that streamlines how contractors manage, train and engage their workforce. It helps bridge the communication divide between the home office and the front front-line workforce by providing a direct conduit for training, documentation, and information.

Benefits

3 key benefits associated with MindForge include:

Safety

Creates a unified safety culture by allowing contractors to build database of worker profiles to understand workforce resources, identify certification gaps, and assign safety training.

Productivity

Facilitate a rapid transfer of information across entire the workforce to communicate jobsite logistics, such as required PPE, weather, emergency protocols.

Data

Aggregate jobsite data and generate reports. Capture, share and export JHA and near-missed data. See who is on the job, when and with what training.

Risks Treated

Key risks mitigated by MindForge include:

MINDFORGE

Company Profile

MindForge

22 East Gay Street
Suite 600
Columbus, OH 43215

Impacted Insurance Policies

Insurance policies that will be positively impacted by MindForge:

- Construction All Risk / Builder's Risk
- Wrap-up / Workers Compensation / Employer Liability
- Environmental Liability
- Professional Liability
- Warranty Insurance

Comments from the President

"Our mission is to study behavioral, motivational and systematic issues related to serious injuries and fatalities (SIFs) to build a body of knowledge that will culminate in training and software explicitly designed to help keep workers safe. Our studies have shown that it's difficult to get information and training to the front line. And, that effort is made more difficult because job sites have a mix of self-performers and subcontractors. We believe that by bridging this gap, you can effectively transfer critical knowledge, skills, and information, when it's needed, to ultimately reduce SIFs."

— Stokes McIntyre, President
